LEAD
(LJK Economic Growth And Development Dialogue)

Innovating for a Better Jammu

OVERVIEW

The **Jammu Smart City Hackathon** (JSCH) is an innovation platform designed to bring together innovators, entrepreneurs, researchers and community organizations to develop practical solutions for the urban challenges faced by Jammu city.

The hackathon encourages participants to transform innovative ideas into scalable solutions, sustainable enterprises and impactful community initiatives through a structured process of problem identification, ideation, mentoring, prototyping and final pitching before a panel of experts. By connecting innovators with government departments and city stakeholders, JSCH seeks to create solutions that are not only innovative but also implementable and capable of generating long-term social and economic impact.

WHY THIS, WHY NOW

A city with huge potential

Jammu has significant potential to improve urban services through innovation, technology and community-led solutions.

A gap to bridge

A considerable gap remains between local challenges and the ability of entrepreneurs, innovators and civil society organisations to address them effectively.

JSCH is designed to close that gap — by putting the city's own problem statements in front of the people best placed to solve them, and by keeping a route open from prototype to pilot to procurement.

OBJECTIVES

01

Bridge the Gap between Urban Challenges and Innovation

Connect government departments with startups, NGOs, innovators and community organizations to develop practical solutions for real-world civic challenges, while establishing the hackathon as a replicable model for other departments.

02

Promote Local Innovation and Problem Solving

Encourage participants to design scalable technological, business and community-driven solutions that leverage the unique strengths, resources and opportunities of Jammu & Kashmir.

03

Strengthen the Innovation Ecosystem

Foster collaboration among startups, social enterprises, NGOs, academia, industry and government by providing mentorship, networking, incubation and implementation pathways for promising ideas.

THE OPPORTUNITY

JSCH is not simply a competition for ideas. It is a platform through which businesses, startups, NGOs and social enterprises can find meaningful opportunities to work with the Municipality — while solving problems that directly affect citizens.

For Innovators
Real problems to solve

For Startups
Potential business opportunities

For NGOs
Opportunities for civic & social-impact

For Government
Access to new ideas, technologies and delivery models

For Citizens
Better urban services

PROBLEM STATEMENTS

The challenges defined by Jammu Smart City Limited are organized below across following six broad categories, alongside additional open themes for tourism, heritage and livelihoods.

01 Urban Planning, Green Spaces & Public Realm

- How to identify and repurpose underutilised urban spaces (canals, spaces under flyovers, vacant pockets & leftover municipal land) into productive public, ecological or community assets?
- How to efficiently identify, map and monitor unauthorised construction, building by-law violations & land encroachments to enable timely verification & enforcement?
- How to develop a data-driven approach to identify locations for urban greening, using suitable vegetation and low-maintenance interventions to improve shade, biodiversity and the urban environment?

02 Cleanliness, Waste Management & Sustainability

- How to create sustained awareness and behaviour change among households to ensure effective segregation of waste at source, and improve participation and compliance over time?
- How to monitor illegal waste disposal across public spaces and enable faster reporting, response and enforcement to improve urban cleanliness?
- How to prevent solid waste from entering drains and waterways, particularly during rainfall to prevent flooding ?

03 Digital Governance, Mobility & Smart Infrastructure

- How to optimise electricity consumption across municipal buildings and public infrastructure while reducing energy wastage and improving energy efficiency?
- How to use real-time data and technology to optimise parking, manage traffic congestion, discourage illegal parking and improve traffic flow across the city?
- What innovative technological solution can help monitor public spaces, identify theft or vandalism incidents in real time, and enable faster response by authorities?

04 Tourism, Heritage & Culture

- How to encourage pilgrims travelling to & from Vaishno Devi to spend time in Jammu, discover its heritage & attractions & contribute to local tourism activity ?
- How to transform the Tawi riverfront into an attractive, well-managed public experience that draws visitors and citizens while supporting local economic activity?
- How to make Jammu's lesser-known heritage sites, cultural assets, local markets and experiences more discoverable and attractive to visitors?

05 Welfare of All

- How to create accessible & sustainable livelihood pathways for socially-backward groups (Divyangs, Senior citizens, Beggars etc) through skilling, flexible work and entrepreneurship opportunities?
- How to improve coordination among municipal authorities, veterinary services, NGOs and citizens for more effective & humane management of stray animal populations?
- How to strengthen trust and engagement between citizens and the Municipality through better communication, responsive services, citizen participation and transparent feedback mechanisms?

06 Urban Resilience & Disaster Management

- How to ensure early fire detection and faster emergency response in Old Jammu City, where congested lanes and old buildings make firefighting challenging ?
- How can we monitor old buildings and structures in real time to detect cracks, damage, or signs of weakness before they become dangerous?
- How to manage and treat stormwater within residential neighbourhoods through urban design & decentralised interventions to prevent infrastructure damage?

OPEN INNOVATION TRACK
Every category stays open beyond the listed challenges — participants may bring any relevant idea within the same theme.

TIMELINE & PROCESS

JSCH will be organized in phases from problem identification through to a Grand Finale and post-hackathon implementation support. Dates below are indicative and subject to confirmation by Jammu Smart City Limited.

PRIZES

- **Winners across all six categories will be awarded cash prizes at the Grand Finale.**
- **Incubation support and potential investment support.**
- **Opening up the pathways with JMC and Jammu Smart City Limited.**

1st Prize
WINNER
₹ 50,000

2nd Prize
RUNNER-UP
₹ 30,000

3rd Prize
SECOND RUNNER-UP
₹ 20,000
